INTRODUCTION

BSCOSMO— is a global blockchain ecosystem that unites business, education, and community into a single decentralized space.The project, with a planning horizon of 700 years and more, was created to form a new digital economy based on the principles of benefit, fairness, and transparency, where value is created and distributed directly among the participants of the ecosystem.

BSCOSMO is aimed at strengthening mutually beneficial relationships between business and customers, eliminating traditional barriers and intermediaries.Using blockchain technologies and decentralized governance, the ecosystem ensures a high level of data security, transparency of interaction rules, and fair distribution of rewards.

Unlike classical models, where the main value is concentrated among a limited circle of intermediaries, BSCOSMO forms a win-win model in which the growth of one participant contributes to the growth of the entire community. Entrepreneurs gain access to a sustainable digital infrastructure, a loyal audience, and new development tools, while clients gain the opportunity not only to use products and services but also to participate in shaping the ecosystem, receiving rewards for real contribution.

The benefit of the ecosystem lies in the fact that each participant — entrepreneur, specialist, or consumer — receives real and measurable advantages from their participation. Fairness is achieved through transparent rules, automated smart contracts, and decentralized governance mechanisms that exclude subjective decisions and uneven distribution of value.

The BSCOSMO ecosystem applies the Human-Only Rewards principle: rewards are intended exclusively for real people. Participation uses an identity and uniqueness verification mechanism (Proof-of-Personhood), excluding the mass receipt of rewards by bots, AI agents, and automated systems.

Thus, BSCOSMO lays the foundation for a sustainable next-generation digital economy based on trust, cooperation, and long-term development, creating a favorable environment for partners, users, and regulators.

MISSION AND GOALS

The mission of BSCOSMO is to create a global **DAO ecosystem (Decentralized Autonomous Organization)** that unites business, educational initiatives, and the community of participants in a single decentralized space. The project seeks to transform the traditional “business — client” model into a new paradigm in which

clients become active participants in the system and can influence its development through decentralized governance mechanisms.

The main goal of BSCOSMO is to provide entrepreneurs and consumers with an effective, transparent, and convenient infrastructure for interaction, joint value creation, and collective decision-making. The ecosystem is built as a self-governing digital environment in which the rules, directions of development, and key changes are determined by the community.

The project is oriented toward **a long-term planning horizon — 700 years and more,** which reflects a strategy of sustainable, intergenerational development. Such an approach allows BSCOSMO not to depend on short-term market cycles and to form an ecosystem that remains relevant for future generations of participants.

The key principle of value distribution in BSCOSMO **is reward exclusively for real contribution.** Ecosystem tokens are granted to participants for useful activity, participation in development, educational achievements, business results, and contribution to the community. This excludes speculative acquisition of value without participation in the life of the ecosystem and contributes to the formation of a healthy, sustainable economy.

The BSCOSMO token performs a multifunctional role:

- **utility —** use within the ecosystem for payment for goods and services, bonuses, and loyalty programs;
- **governance —** participation in voting and decision-making within the framework of the DAO;
- **social —** support of educational programs, development initiatives, and social projects.

Ultimately, BSCOSMO seeks to form a self-governing global digital economy in which businesses and clients jointly create value, manage the system, and share the results of their participation, increasing the level of trust, transparency, and efficiency of interactions.

Key Factors and Analytics

1. Global Growth of E-commerce and the Digital Economy

The global economy is confidently moving toward digital sales channels. As of 2025–2026, the volume of global e-commerce exceeds **$6 trillion** per year, and its share in total retail trade continues to grow. E-commerce has ceased to be an additional sales channel and has become the **basic infrastructure** for most companies.

In the next 10 years (until 2035), a new phase of growth is expected, associated with:

- the widespread digitalization of small and medium-sized businesses,
- the growth of cross-border trade,
- the introduction of AI assistants into the purchasing process,
- the transition to personalized and automated sales models.

Companies that are not integrated into digital ecosystems risk losing competitiveness and access to the global market.
BSCOSMO responds to this challenge by providing businesses with a ready-made Web3 platform for going online, interacting with clients, and scaling through a unified ecosystem.

---

2. Maturation of the Blockchain and Cryptocurrency Market

The blockchain and cryptocurrency market has passed the stage of experimentation and is entering a phase of infrastructural development. Despite its cyclicality, the global capitalization of crypto assets is measured **in trillions of dollars**, and blockchain technologies are increasingly being used in the real economy.

The key trend of the next decade is t**he practical implementation of blockchain in business processes:**

- tokenization of assets and liabilities,
- automation of settlements and contracts through smart contracts,
- decentralized governance and transparent reporting.

Forecasts by leading analytical companies show that the real-world asset (RWA) tokenization market may reach **trillion-dollar volumes by 2030**, and blockchain will become a standard layer of digital infrastructure.

BSCOSMO is initially designed as a business-oriented ecosystem, where the token is used not as a speculative instrument, but as **an economic mechanism of interaction, trust,andvaluedistribution.**

3.Growing Importance of Trust, Transparency, and Automation

As the economy becomes more digitalized, the demand increases for:

- transparency of operations,

- data protection,
- predictability and fulfillment of obligations.

Traditional centralized models often fail to cope with these tasks, especially in the international environment.

BSCOSMO solves this problem through the use of smart contracts and blockchain, where key processes are automated and do not depend on the human factor:

- accrual of bonuses and rewards,
- fulfillment of transaction conditions,
- loyalty management,
- recording of participants' reputation and KPIs.

This forms a new model of trust between businesses and clients, as well as within the ecosystem itself.

---

4. Artificial Intelligence as a Driver of the Next Stage of Growth

AI is becoming a central element of next-generation digital ecosystems. In the next 10 years, artificial intelligence will determine:

- efficiency of business management,
- quality of analytics and forecasting,
- speed of decision-making,
- personalization of user experience.

Within **BSCOSMO**, AI is considered a strategic asset rather than a supporting tool. The platform предусматривает:

- development of its own AI module,
- integration of AI into business process management,
- use of AI to support business club members in decision-making,
- intelligent distribution of tasks, partnerships, and resources,
- support of DAO governance and KPI analysis.

AI in BSCOSMO will become the connecting link between data, economics, and governance, increasing the efficiency of the ecosystem as it scales.

---

5. Synergy of Factors and Positioning of BSCOSMO

BSCOSMO is at the intersection of several global megatrends:

- growth of e-commerce,
  institutionalization of blockchain,

transition to DAO models,
integration of artificial intelligence into business and governance.

The synergy of these directions forms **the long-term strategic foundation** of the project. BSCOSMO does not merely follow trends, but creates infrastructure capable of adapting and developing over decades, uniting business, technology, and community into a single decentralized ecosystem.

Ecosystem BSCOSMO

The BSCOSMO ecosystem represents a multifunctional space that unites businesses, clients, and the community on a single platform. It includes several key components tha**t ensure a closed cycle of services and interactions:**

- **BSCOSMO Business Hub (business club).** This is an international business club created for entrepreneurs for the purpose of exchanging experience, joint growth, and scaling. The club already includes hundreds of businesses from different countries, and their number is constantly growing. **Club members gain access to educational and consulting programs**, events, and networking with investors and partners. The Business Hub serves as the foundation of the ecosystem, forming a community of loyal resident companies ready to use shared tools for promotion and interaction with clients.

- **BSCOSMO Marketplace.** A large online platform for trading goods and services, where resident companies of the Business Hub and partners can place their offers. The marketplace is integrated with the BSCOSMO blockchain infrastructure, which allows tokens to be used as a means of payment and bonuses. **Buyers receive cashback and bonuses** in BSCOSMO tokens for purchases, reviews, and other activity on the platform. Smart contracts ensure a secure transaction: for example, a guaranteed delivery mechanism is предусмотрен — if the product is not delivered properly, the smart contract automatically returns the funds to the buyer. Such an approach increases the reliability and attractiveness of the marketplace for end customers.

- **BSCOSMO Academy (educational platform).** Education and development are one of the priorities of the ecosystem. The Academy provides educational products: courses, trainings, intensives on entrepreneurship, business management, working with marketplaces, mastering digital technologies, etc. The Academy’s programs help club residents and their employees improve their qualifications, and also train the younger generation (students, aspiring entrepreneurs) in modern skills. **Academy participants may receive scholarships and grants in BSCOSMO tokens** (for example, for success in

studies or for developing projects valuable to the community). This stimulates youth engagement and the formation of a talent reserve for the ecosystem.

- **Financial infrastructure.** BSCOSMO is developing toward the creation of its own financial services necessary to support the internal economy. **The Roadmap includes the launch of its own centralized exchange for listing the BSCOSMO token and trading other crypto assets,** as well as the issuance of a stablecoin for the convenience of settlements. In addition, at later stages (see the Roadmap), the creation of BSCOSMO's **own blockchain network** and even its **own bank** integrated with the ecosystem is planned. These steps are aimed at forming a full cycle — from token issuance and management to exchange and traditional financial services — within a single BSCOSMO brand.

- **Community and decentralizedgovernance.** The most important part of the ecosystem is the community of token holders and DAO participants. **BSCOSMO will functionas adecentralized autonomous organization, wherecritically important decisionsare madethrough votingbytoken holders**. For this purpose, a **GlobalDAO Treasuryisformed** — a fund of tokens used by decision of the community (for example, for issuing grants, financing new platform features, marketing campaigns, etc.). Such an approach ensures transparency and consideration of the community's interests in the development of the ecosystem. Each active participant — whether a business or an individual user — can submit a proposal and influence the future of the platform.

- **Interaction of components:** In the BSCOSMO ecosystem, all the listed components are interconnected. For example, businesses from the Hub receive privileged conditions on the marketplace and access to training in the Academy; Academy graduates can launch their projects on the marketplace or gain employment in resident companies; financial services (exchange, stablecoin) facilitate transactions within the marketplace and between club members; DAO mechanisms ensure collective budget management, making decisions on promotions for clients, distribution of rewards, and infrastructure development. **The BSCOSMO digital token connects all parts of the ecosystem into a whole — being a universal carrier of value, a tool for incentives and voting.** In the following sections, we will examine in more detail what problems BSCOSMO solves for businesses and clients, as well as the technical implementation of the platform.

Problems and proposed solutions

When creating BSCOSMO, the team analyzed the main **problems faced by modern businesses and their clients,** and developed solutions based on the ecosystem:

- **The problem of customer retention and ineffective marketing.** Traditional loyalty programs (discount cards, points) are often ineffective: clients do not feel real value, and companies spend budgets in vain. In addition, attracting

new customers requires significant marketing expenses, the results of which are difficult to measure.
The solution in BSCOSMO: a unified blockchain-based bonus system covering multiple businesses. **Cashback and bonuses are issued in the form of tokens,** which the client can use with any participant of the ecosystem. For example, having received tokens for purchasing clothing in a store — a BSCOSMO resident — the user can spend them on the services of a beauty salon that is also part of the ecosystem.

- **The token acquires real value for the client, since it can be accumulated and exchanged.** This increases engagement: buyers are more willing to make purchases from BSCOSMO partners in order to earn tokens, and businesses receive an influx of loyal customers without the need to launch their own promotions each time. Companies' marketing expenses are reduced, since the ecosystem itself incentivizes clients through reward mechanics.

- **The problem of high risks in cooperation and lack of trust.** Small and medium-sized businesses find it difficult to establish partnerships with each other and with large companies — competition and lack of trust stand in the way. Clients, in turn, often doubt the honesty of new or unfamiliar sellers, fearing fraud, poor-quality goods, or delivery failure.
  The solution in BSCOSMO: a unified decentralized environment with transparent rules and reputation. All transactions and key actions are recorded on the blockchain, which eliminates the possibility of fraud — records cannot be falsified. To ensure trust, **escrow smart contracts** are implemented: the client's payment for the product is held by a smart contract until the product is delivered and confirmed by the recipient. Only after that does the seller receive payment. In the event of a dispute, the tokens are automatically returned to the buyer through the smart contract. Thus, **clients are technologically protected,** which increases trust in any seller within the ecosystem. As for trust between businesses — club participants — BSCOSMO forms a **community of residents with verified reputations.** Upon entering the Business Hub, a company undergoes a certain selection and verification process, and its subsequent activity (customer reviews, success of completed transactions, etc.) is reflected in the ecosystem. This creates prerequisites for cooperation: residents are more willing to conclude deals with each other (for example, joint promotions, cross-marketing), trusting the blockchain data about the reliability of the partner.

- **The problem of secure storage and analysis of data.** Companies accumulate enormous volumes of data about their clients (purchases, preferences, reviews), however centralized storage is fraught with leaks, and analysis of data scattered across different systems is complicated. In addition, clients are increasingly concerned about the issue of confidentiality.
  The solution in BSCOSMO: a blockchain-based data storage and analytics platform. BSCOSMO provides businesses with tools for the secure storage of anonymized data on transactions and customer behavior in a

distributed ledger. As a result, the probability of leaks is significantly reduced — **the data is securely encrypted,** and access to it is limited by smart contracts. At the same time, the platform offers analytical dashboards for residents, where key indicators are aggregated: purchase frequency, average order value, conversion of bonuses into new purchases, etc. These **analytical insights** help companies better understand their audience and effectively target marketing activities.At the same time, privacy is respected: clients' personal data can be stored in encrypted form, and its use for marketing purposes is possible only with the client's permission (for example, by granting access through tokenized permissions).

- **The problem of scaling and entering new markets.** It is difficult for small businesses to scale geographically — opening new branches requires resources, knowledge of local markets, and is associated with risks. Even entering online marketplaces does not guarantee success due to high competition.
  The solution in BSCOSMO: a global ecosystem with a network effect. By joining BSCOSMO, a business effectively gains immediate access to an **international audience** — all users of the ecosystem potentially become its clients. The BSCOSMO marketplace plans global expansion (see Roadmap: integration of millions of clients worldwide), which will allow even small companies to sell goods globally without the need to open physical stores abroad. **In addition, the ecosystem supports localization** — plans include the creation of product pickup points in different countries, as well as partnerships with local logistics services, which will facilitate delivery. Thus, BSCOSMO helps entrepreneurs scale by reducing barriers to entry into new markets and providing ready-made infrastructure (platform, payments, logistics, marketing through the bonus system).

Taken together, **BSCOSMO's solutions are aimed at building trust, stimulating activity, and facilitating scaling for businesses**, while simultaneously increasing value and protection for end clients. In the next section, we will describe the technological features of the platform that make the above-described solutions possible.

Technological features of the platform

BSCOSMO is based on modern blockchain technologies and integrates a number of digital solutions to ensure its functionality. Here are the key **technological features oftheecosystem:**

- **Blockchain andsmartcontracts.** The platform is based on blockchain (at the current stage, the BNB Smart Chain network is used for the BSCOSMO token, with the launch of its own blockchain network planned in the future). Smart contracts implement critical business logic: accrual and distribution of tokens, holding payments until conditions are fulfilled (escrow), management of the DAO treasury, the token staking process, and others. The smart contract code undergoes security audits to eliminate vulnerabilities. **The use of blockchain guarantees the immutability of records** (transactions,

reviews, DAO decisions cannot be falsified) **and unlimited scalability of the community** (new participants can join the DAO by purchasing tokens without any restrictions).

- **Mobile application and Web platform.** For user convenience, the **BSCOSMO Wallet** mobile application has been developed (a wallet supporting the BSO token and other major cryptocurrencies) and **BSCOSMO Market** (a marketplace in the form of a mobile application and web interface). Through the application, **clients can make purchases and instantly receive cashback in tokens,** track their balance and transaction history. Businesses, through the web platform, can manage their storefronts on the marketplace, configure loyalty programs, and view analytics. A feature of the application is the implementation of **augmented reality (AR)** — according to the Roadmap, starting from 2027, AR showcase functionality is planned, allowing users to "try on" products (for example, place virtual furniture in their home before purchase). Such innovation increases client engagement and gives businesses a new channel for product presentation.

- **NFT and digital goods marketplace.** BSCOSMO integrates NFT (non-fungible token) technologies to expand the capabilities of the ecosystem. In 2027, an **NFT marketplace** will be launched, where businesses and content creators can issue and sell collectible tokens, certificates, or digital goods. For example, a restaurant — a BSCOSMO participant — can issue a limited series of NFT coupons for a special menu; the Academy educational program can issue NFT certificates of graduation and achievements. **NFTs enhance interaction** with the audience by creating elements of gamification and VIP privileges (owners of certain NFTs receive special discounts, access to events, etc.). All NFTs also operate on the blockchain, and their trading occurs transparently through smart contracts.

- **Staking and reward system.** The BSCOSMO ecosystem provides a token staking mechanism aimed at encouraging long-term participation and protocol sustainability. Holders of BSCOSMO tokens can voluntarily lock their tokens in staking smart contracts to participate in DAO governance, support the functioning of the ecosystem, and gain access to advanced platform features.

  Rewards within staking are formed according to the rules of the protocol and DAO mechanisms and do not constitute guaranteed income or a share in the profit of any legal entity. The size and conditions of rewards may change depending on network parameters, participant activity, and DAO decisions.

  Staking not only incentivizes token holding (reducing supply on the market), **but also performs a social function:** tokens transferred to staking may be used by the protocol to finance microcredit programs for residents, grants for education in the Academy, or other initiatives approved by the DAO. Thus, stakers simultaneously receive rewards and participate in the development of the community.

- **Scalability mechanisms and low fees.** To ensure fast and low-cost transactions within the ecosystem, BSCOSMO was initially launched on BNB Chain, known for its low fees and high throughput. In the future, as the number of users and operations grows, a transition to **BSCOSMO's own blockchain** or the use of Layer 2 scaling solutions is planned. This will allow fees to remain at a minimal level even with millions of transactions (for example, cashback for each purchase) and ensure the smooth operation of the marketplace without delays.

- **Security and reserve mechanisms.** The security of user data and funds is a priority for BSCOSMO. In addition to smart contract audits, measures such as **multi-factor authentication in applications**, backup of important data (encrypted backups), and monitoring of suspicious activities on the marketplace are implemented. Within the tokenomics, **a strategic token reserve** is provided, which serves as an insurance fund — for example, in the event of a critical error or a breach of part of the system, tokens from the reserve fund may be allocated to compensate affected parties by decision of the DAO. Although such a situation is unlikely, the presence of a reserve increases the community's trust in the platform.

Thus, BSCOSMO combines **advanced blockchain technologies, mobile applications, and security solutions** to provide users with a convenient, functional, and reliable product. Now, having examined the mission, the challenges, and the technology, we move on to a detailed consideration of the project's economic model — the BSCOSMO token and its purpose,распределения и потенциала роста ценности.

BSCOSMO token and its use

The BSCOSMO token (ticker: BSO) is the native utility token of the ecosystem, underlying all economic interactions on the platform. It is designed as a **multifunctional instrument** performing a number of important roles:

- **Means of settlement.** BSO is used to pay for goods and services on the BSCOSMO marketplace. Clients can pay with tokens directly, receiving additional discounts or bonuses from sellers. For businesses, this is beneficial, as it stimulates demand for their goods within the ecosystem and reduces dependence on fiat payments (which may be subject to payment system fees).

- **Bonus and reward instrument.** Each time a client makes a purchase from a platform participant, **cashback in BSO tokens** is credited to them. The cashback percentage may vary depending on the loyalty program of a particular business or network-wide campaigns approved by the DAO. In addition to purchases, tokens serve as a reward for other useful actions: writing reviews, attracting new users (referral program), participation in education (for example, successful completion of a course in the Academy), and others. Thus, BSO motivates activity and **creates additional value for**

users from participating in the ecosystem — they are not just consumers, but co-participants earning together with the growth of the platform.

- **Voting token (governance).** BSCOSMO functions as a decentralized organization, and the BSO token grants the right to vote in decision-making. Token holders can participate in voting on the most important development issues: distribution of funds from the DAO treasury, selection of strategic partners, changes to tokenomics parameters, launch of new products, etc. **The more tokens a participant holds, the greater the weight of their vote;** however, the platform may introduce mechanisms against concentration of power (for example, logarithmic reduction of the voting weight of large holders or a minimum participation KPI requirement). The governance function of the token ensures that **the course of BSCOSMO's development is determined collectively,** taking into account the opinion of the community, which increases participant loyalty and responsibility for decisions.

- **Staking and equity participation.** As mentioned earlier, BSO holders can temporarily **delegate (lock) their tokens in staking pools.** In return, they receive rewards, the amount of which depends on the ecosystem's revenues and the current emission policy. Essentially, staking turns token holders into a kind of "shareholders" of the ecosystem — **they receive a portion of the profit** (for example, transaction fees from the marketplace or income from paid Academy services) proportionally to their share of tokens in staking. This mechanism is aimed at long-term token retention and alignment of interests: participants who lock BSO are interested in the sustainable development of the platform, since their rewards depend on it.

- **Means of ecosystem development.** The project uses tokens to finance various initiatives and growth directions. For example, the **"Education & Academy" fund** (5% of the emission) allocates tokens for scholarships, grants, and the launch of new educational programs. **The "Partners & Integrations" category** (3% of the emission) is intended to incentivize strategic partners — large companies or services that integrate with BSCOSMO (they are provided with tokens in exchange for commitments to long-term cooperation). **Charitable and social programs** may also receive funding in tokens through DAO decisions. Thus, BSO plays the role of fuel on which the development of the entire project "runs" — by distributing it in a targeted manner, BSCOSMO invests in its own growth and sustainability.

- **Human-Only Verification & Anti-Automation Policy.** Rewards within the BSCOSMO ecosystem are available exclusively to verified real people. Participation applies a Proof-of-Personhood mechanism, including verification of uniqueness and confirmation of "live presence" (liveness). The status of a verified participant is non-transferable and may require periodic confirmation. The mechanism excludes the receipt of rewards by bots, AI agents, automated systems, and multi-accounts. In case of detection of automation or abuse, access to the program may be restricted or revoked.

Itshould be emphasized that the BSCOSMO token is not intended to be a security or ameans of speculation. Its main value is utilitarian. The more active the ecosystem, the greater the demand for the token for operations, and the higher its value for participants. The distribution and emission model (considered in the next section) is designed to avoid sharp fluctuations and ensure a gradual increase in the token's scarcity as the number of users grows.

Below, we will examine in detail the emission parameters (total supply, unlocking schedule) and the distribution of tokens among various categories, as well as the measures taken to maintain a healthy token economy.

Token emission and distribution

BSCOSMO adheres to a unique approach to tokenomics, **oriented toward stability and long-term growth.** The total emission volume of the **BSO token is fixed and amounts to 26 billion tokens.** No new tokens beyond this amount will be issued, meaning the model is **non-inflationary.** However, **the distribution of tokens over time** is extended over centuries in order to balance the interests of all stakeholders — from early participants to future generations.

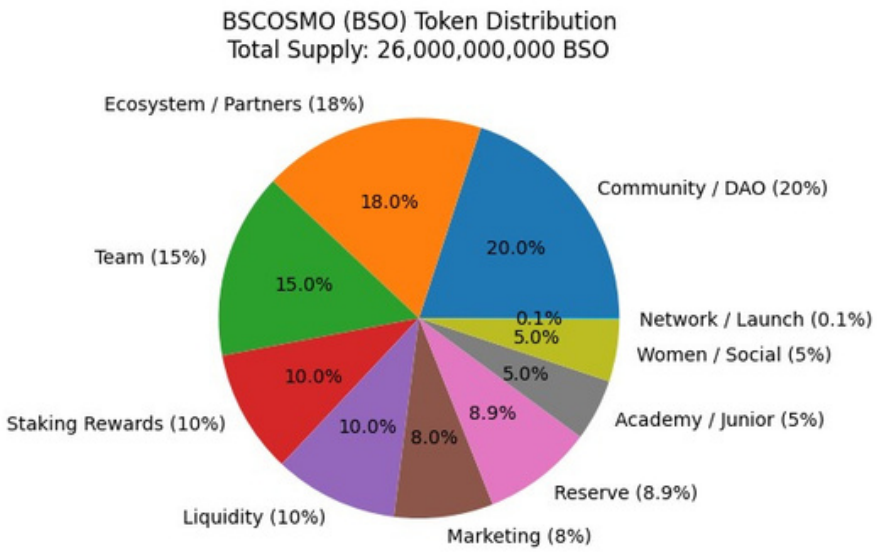

A feature of the BSCOSMO model is the transition **to decentralized governance** based on a DAO, which is closely connected with the project's tokenomics. This chapter explains how the DAO functions and how DAO principles influence the token economy:

Decentralized Autonomous Organization (DAO). The BSCOSMO DAO is an organizational structure in which key decisions are made **through voting by BSO token holders.** Each token holder can participate in governance, either by directly voting on proposals (if holding a sufficient share of BSO) or indirectly by delegating their vote to a trusted representative. Proposals may be submitted by the project team as well as by any active community member who has obtained the required support (for example, 1% of the total number of tokens in staking). Voting uses the principle of weighted voting — the more tokens a participant has (taking into account coefficients for long-term staking), the greater the weight of their decision.

BSCOSMO (BSO) Tokenomics

- **Ticker:** BSO
- **Total supply:** 26,000,000,000 BSO (100%)
- **Project launchandtokengeneration:** December 26, 2022
- **Initial unlock:** 26,000,000 BSO (0.1%) — for network functioning

- **Remaining amount:** 25,974,000,000 BSO frozen until April 2026
- **Unlocking:** from April 2026 to May 2731
- **Emission formula:** monthly unlocking with a 0.05% decrease in volume each month (deflationary model)

Token Distribution by Categories

Category	Amount (BSO)	% of Total	Vesting / Unlocking
Network / Launch	26,000,000	0.10%	Available immediately
Available immediately	3,900,000,000	15.00%	Available immediately

Category	Amount (BSO)	% of Total	Vesting / Unlocking
🤝 Community / DAO	5,200,000,000	20.00%	Unlock from April 2026 according to schedule, DAO decisions
🎁 Staking Rewards	2,600,000,000	10.00%	Unlock from April 2026 according to schedule
📣 Marketing	2,080,000,000	8.00%	Unlock from April 2026 according to schedule
🌍 Ecosystem / Partners	3,120,000,000	18.00%	Unlock from April 2026 according to schedule
💰 Liquidity (DEX/CEX)	2,600,000,000	10.00%	Unlock from April 2026 according to schedule
🎓 Academy / Junior	1,300,000,000	5.00%	Unlock from April 2026 according to schedule
Women / Social projects	1,300,000,000	5.00%	Unlock from April 2026 according to schedule
🔒 Reserve	2,314,000,000	8.90%	Unlock from April 2026 according to schedule

In 2022–2023, at the start of the project, approximately 12,000,000 tokens (out of the 26,000,000 available immediately) were frozen for 3 years for the closest participants of the ecosystem; in the absence of KPI fulfillment or activity, the freezing period is automatically extended every 3 years.

Overall, such a distribution of emission demonstrates BSCOSMO's commitment to theideas of **decentralization, sustainability, and fairness.** Themajorityoftokens areeither distributedamong the community(rewards, DAOtreasury, publicfloat) or strictlylimited by longlock-ups (reserves,team).N **o participant controls an excessive share of the supply, and no significant pool of tokens enters the**

market without a long-term vesting schedule. This minimizes the risks of manipulation and sudden price collapses.

🧭 Summary of BSCOSMO Tokenomics

The BSO token was created with a unique ultra-long-term approach: the entire volume of 26 billion tokens will be fully unlocked only by **May 2731,** when the last token enters circulation.

This strategy is not just a technical feature, but a manifesto of generational vision:

- 📉 Monthly **deflationary emission** (–0.05% per month) ensures supply stability
- 🕊️ Sustainability and protection against dumps due to gradualness and predictability
- 🌱 Support for long-term ecosystem growth without speculative pressure
- 🧬 Formation of a digital assetcapableofbeing passeddown through generations and preservingvaluefor **centuries**

BSO is a token not only of the present, but also of the future.

Thelast token, issuedin2731,willbecome a symbol oftrust, foresight, and the strength of the decentralized ecosystem that we are building already today.

Token value potential **Token Value Potential**

The BSCOSMO token (BSO) has significant potentialfor value growth and benefits for holders, due to the combination of limited supply,growing demand within the ecosystem, and a well-designed economic model. Letus consider the main factors influencing **the token's profitability** for project participants:

- **Growth of the user base and network effect.** As more and more businesses join BSCOSMO and bring their clients into the ecosystem, demand for tokens for transactions and bonuses will continuously grow. **The more active users there are, the higher the baseline demand** for BSO as a utility token (for purchases, rewards, voting). At the same time, the token supply on the open market increases extremely slowly (see the previous section).

- **Scarcity and value of holding.** The BSCOSMO strategy is to make the **token more valuable within the ecosystem than outside it.** In other words, to create incentives for holders not to sell BSO on exchanges, but to use it within the platform (or hold it for voting and staking). For this purpose, numerous utilities have been implemented: discounts when paying with the token, access to exclusive goods/services for token holders, voting rights in the DAO, income from staking. The more such advantages there are, the

fewer participants will want to part with their tokens, especially considering the project's growth prospects. **The tokencirculation structureis oriented towardstimulating useandparticipationinthe ecosystem, ratherthan short-term market operations.**

- **Savings and benefits for businesses.** Resident companies participating i the BSCOSMO ecosystem receive additional advantages through the use of the token in operational activities. Businesses can receive tokens within loyalty programs, rewards, and platform activity, using them for settlements, access to services, and participation in DAO mechanisms. The use of the token allows businesses to reduce transaction costs, increase customer engagement, and integrate into a unified digital ecosystem. Tokens received for activity reflect the business's contribution to the development of the platform and may be used within the ecosystem in accordance with its rules. Such a model encourages companies to develop sales, attract clients, and participate in community growth, forming a sustainable connection between business activity and the development of the BSCOSMO ecosystem. The main focus is placed on long-term use and participation, rather than short-term market operations.
- **Sustainability of the token economy and long-term predictability.** The BSCOSMO token economy isdesigned with an emphasis on long-term sustainability, predictability, and protection of the ecosystem from sharp supply imbalances. Extremely long token lock-up periods (700 years and more) and a minimal volume of tokens in free circulation at early stages are aimed at reducing risks associated with sudden unlocks and short-term speculative activity. Such a token circulation structure contributes to building trust among ecosystem participants and ensures transparency of future unlocks, the parameters of which are known in advance and cannot be changed unilaterally.Starting from 2027, the ecosystem provides for the possibility of using part of the total revenue to implement token buyback and/or burning mechanisms. Decisions on the application of such mechanisms are made in a decentralized manner through the DAO and are aimed at maintaining a balance between token usage, its circulation, and the long-term sustainability of the ecosystem. This model is oriented toward stimulating participation, usage, and responsibility within the ecosystem, rather than short-term market operations.

Project roadmap

BSCOSMO has a clear **development roadmap** covering the period from the project launch and for years ahead. The roadmap reflects the stages of expanding the platform's functionality, community growth, and entry into the international level. Below is a summary of the key stages:

2022–2023 | Foundation Formation (implemented)

● launchof the **BSCOSMOtoken(BSO)**and basicWeb3infrastructure; ● formation of the **BSCOSMO Club;**

- onboarding of the first resident businesses;
- launch of the marketplace — BSCOSMO MARKET;
- launch of the main digital platforms:
  bscosmo.io
  hub.bscosmo.io

2024 | Preparation of Ecosystem Directions (implemented)

- development of the businessclub and internationalbusine
- preparation of educational and social programs;
- testing of loyalty and engagement systems;
- launch of the crypto wallet — BSCOSMO WALLET;
- growth of international presence (launch in 4 countries — UAE, Ar
  Georgia, Russia).

2025 | Launch of Key Directions and EXPO (implemented)

Education and Communities (launch in 2025)

- **BSCOSMO Academy —** educational platform for entrepreneurs and specialists (600+ students)
  academy.bscosmo.io
- **BSCOSMO Junior (10–16 years old) —** programs for children and teenagers (200+ students)
  junior.bscosmo.io (within the ecosystem)
- **BSCOSMO Women —** international community of women entrepreneurs
  women.bscosmo.io (within the ecosystem)

Economy and Community

- ~300 active resident businesses;
- total annual turnover of residents: **$500 million;**
- internal B2B turnover within the ecosystem: **$25millionper year;**
- average growth of residents: **37% per year;**
- geography: UAE, Armenia, Georgia, Russia, France, USA.

Loyalty Systems (active)

- **MOOTQ —** bonuses, participant engagement and motivation
  mootq.bscosmo.io

- **BSCOSMOBLACK —** statuses, privileges and exclusive opportunities black.bscosmo.io

BSCOSMO EXPO 2025

- own organization of an international business event;
- about **150 participants;**
- approximately **10,000 visitors;**
- representatives of **10 countries;**
- B2B meetings, presentations, and networking.

2026 | Artificial Intelligence and Franchises

Artificial Intelligence

- launch of **BSCOSMO's own AI module;**
- AI for:
    - analytics and support of business decisions;
    - process optimization;
    - personalization of education and loyalty;
- integration of AI into Club, Academy, MOOTQ, and BLACK.

Franchise Model (new milestone)

- launch of BSCOSMO franchises;
- presence in 10 countries;
- unified standards for:
    - the club;
    - the academy;
    - events;
    - loyalty and services;
    - expo;
- scaling of the ecosystem through local partners.

BSCOSMO Missions

International business missions for entrepreneurs and top managers.
B2B meetings, market entry, and business connections.
A business program with additional cultural and networking experience.

2027 | AR / VR and Digital Spaces

- development and testing of AR/VR solutions;

- virtual:
    - offices;
    - showrooms;
    - educational and networking spaces;
- integration of AR/VR with the marketplace and educational services.=

2027–2028 | Own Blockchain

● design and testing of the own network; ● launch of the **BSCOSMO blockchain;** ● migration of key services; ● strengthening of DAO governance and technological independence.

2028 | Financial Infrastructure

● payment and settlement services for residents; ● partnerships with licensed financial institutions; ● launch of its own bank; ● integration of fiat and digital instruments within the framework of legislation.

2029 | Marketplace and DAO

- scaling of the global BSCOSMO marketplace;
- transition of key decisions under **DAO governance;**
- the team — one of the groups of active DAO participants.

2030+ | Long-Term Evolution

● sustainable development of the global ecosystem;
● growth of educational and business направления;
● a mature DAO model and generational continuity.

Of course, the roadmap is a guideline that may be adjusted over time. The order and timing of the implementation of certain items may shift depending on market conditions, technological readiness, and DAO decisions. Nevertheless, **the strategic direction of BSCOSMO remains unchanged:** continuous expansion of the platform's capabilities, geographic presence, and number of participants, based on innovation and the strength of the community.

An important aspect of the Roadmap is that **many key milestones have been achieved according to plan.** This demonstrates the high competence of the team and the seriousness of its approach to fulfilling its commitments. Participants can track progress on the roadmap through regular reports and updates from the project team, and in the future — through transparent **DAO reports**, when governance fully transitions to the community.

Legal information

This section sets out important **legal provisions and disclaimers relating** to the BSCOSMO project, its token, and documents (including this WhitePaper):

- **Status of the BSCOSMO token (BSO):** the token is a **utility** (service) digital asset intended for use within the BSCOSMO platform. It does not grant ownership rights in the company, is **not an equity interest or a security.** Ownership of BSO does not provide an automatic right to a share of BSCOSMO profits (outside the framework of предусмотренных staking or reward mechanisms) and does not guarantee an increase in its value. The token is issued on an existing blockchain network (BNB Chain) and is subject to its technical rules (BEP-20 standard).

- **Platform terms of use:** All BSCOSMO users (both businesses and individuals) must agree **to the user agreement and privacy policy published on the official website and in the application.** These documents regulate the rights and obligations of participants, the procedure for dispute resolution, the processing of personal data, etc. For example, **it is emphasized that users are responsible for the safekeeping of their private keys** and wallets; blockchain transactions are irreversible, and BSCOSMO cannot cancel a transaction at the user's request. Clients must comply with the laws of their country regarding cryptocurrency taxation: the project does not act as a tax agent, but may, upon request, provide the user with their transaction history for reporting purposes.

- **Limitation of liability:** This document (WhitePaper) is provided exclusively for informational purposes. It is not an investment memorandum, an offer, or a solicitation to purchase any assets. The BSCOSMO team **does not bear responsibility for any losses** that may arise directly or indirectly as a result of participation in the project or ownership of the token. Cryptocurrencies are a high-risk class of assets; their value is volatile, and invested funds **may be partially or fully lost due to market fluctuations or technical vulnerabilities.** Participants must independently assess risks and make decisions. The project provides all services "as is" without warranties, express or implied, including fitness for a particular purpose, error-free operation, or uninterrupted availability.

- **Intellectual property:** The BSCOSMO brand, logo, WhitePaper materials, and accompanying documents are **the intellectual property of the project.** Their copying, distribution, or other use without permission is prohibited, except in cases where this is explicitly allowed (for example, the WhitePaper may be freely distributed in its unchanged form for ознакомление by a wide audience). The smart contract code may be open (open-source) or closed — in the relevant cases, licenses for the use of the code are specified. Any third-party use of ecosystem elements (for example, launching projects under a similar name, presenting them as official) will be prosecuted in accordance with the law.

By following these legal provisions, participants confirm their understanding of the nature of the project and their agreement with the rules. BSCOSMO strives for **maximum transparency and honesty with its community;** therefore, the legal aspects have been carefully developed to protect both the interests of users and the project itself from undesirable legal risks.

Conclusion

BSCOSMO is not just a token or a digital platform. It is the foundation of a new economic space in which business, technology, and community are united around common values: fairness, transparency, **long-term orientation, and mutual benefit.**

We have consciously chosen the path of sustainable development:

- through **decentralization and DAO** governance,
- through ultra-long-term tokenomics for **more than 700 years,**
- through **the implementation of blockchain infrastructure,**
- through investment **in education, youth, and women,**
- through the creation of **a transparent and efficient business space** in which each participant receives real value.

BSO is a token of the future. It was created not for speculation, but for building a global ecosystem where everyone can become a part of it and influence its development.
We believe in generational thinking, in the power of cooperation, and in the fact that fair models are capable of changing the world.
